

Advanced Terraform on Azure

Lab0 - Lab Setup

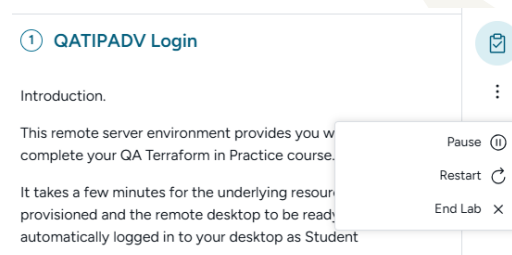

Lab Objectives

In this lab, you will:

- Launch and configure Visual Studio Code (VSC) in your lab virtual machine ahead of running subsequent labs
- Access Azure using provided credentials.

Teaching Points

This lab will configure your lab environment. The environment has a time limit of 36 hours after which it will be decommissioned. Use the 'Pause' option at the end of each days training to ensure that the environment remains consistent for the entire duration of the course. If the lab expires, ends or is restarted, you may have to perform steps previously completed before progressing further.

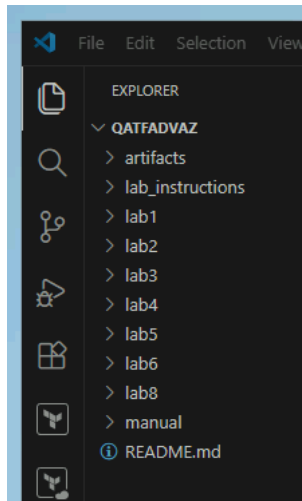

Before you begin

These instructions assume you have accessed the QA Portal and have followed the instructions provided there. You should therefore have this screen in front of you before proceeding...

Task1 Set up your Lab environment

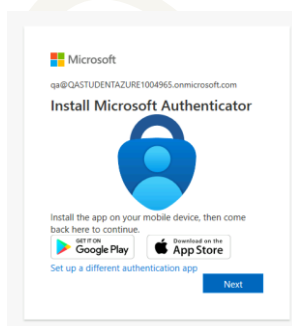

1. Open VSC  from the taskbar
2. Verify that the Hashicorp Terraform and VSCode VSC extensions are installed
3. Verify **c:\qatfadvaz** has been added to Explorer;

These class files are available at <https://github.com/qatip/qatfadvaz.git> for post-class use.

Task 2 Logging into Azure

4. Open a new web browser tab and login to the Azure Portal using **‘Work or School’** and your provided lab credentials. Select **‘This app only’** for device registration.
5. Complete the one-off Multi Factor Authentication setup and then close the dialog box. You can use the Microsoft Authenticator OR select ‘Set-up a different authentication app’ ...

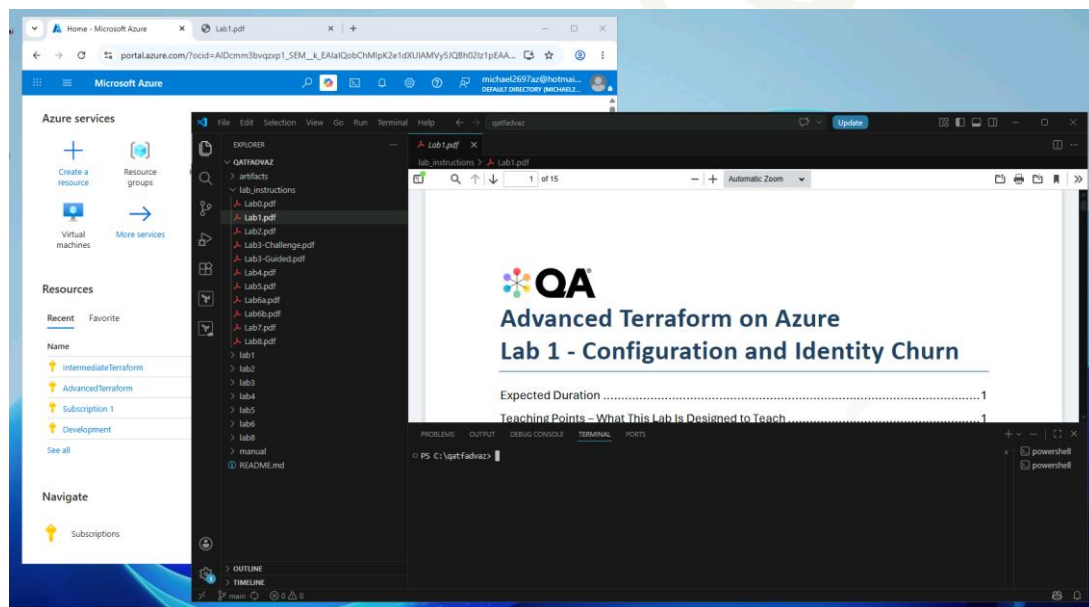

```
PS C:\qatfadvaz> az login
[Tenant and subscription selection]
No  Subscription name  Subscription ID  Tenant
-----
[1] * Azure Subscription 2916852  e716d89f-6891-48f5-8bff-1f4085ab37a8  QASTUDENTAZURE1004965
The default is marked with an *; the default tenant is 'QASTUDENTAZURE1004965' and subscription is '
Select a subscription and tenant (Type a number or Enter for no changes):
```

Note down your subscription id, you will need it during future labs.

6. When required to run Terraform commands from the IDE terminal, you will need to authenticate to Azure unless you already have an active session.
7. Type **"az login"** in your terminal session.
8. A dialog box should open, possibly behind VSC if in full-screen.
9. Use credentials provided by your instructor to log in, along with your MFA code.
10. Return to VSC and press enter to accept the proposed default tenant and subscription.
11. As you will need to supply credential throughout the course, it is recommended that you create a test document containing your username, password and subscription id. Use **az account show** to display your subscription id.

Task 3 Arranging your remote desktop

12. In order to avoid the frustration of desktop clutter, it is suggested you arrange your desktop as shown below. In this way you can easily switch between your web browser, in which you can view your course manual, lab instructions, the Azure portal and any other web resources, and the VSC interface, in which you will create, and action terraform files.

View the lab instructions within VSC or through a browser tab

Congratulations, you have completed this lab
