

Advanced Terraform on Azure

Lab0 - Lab Setup (Skillable Platform)

Lab Objectives

In this lab, you will:

- Sign up to qa.learnondemand.net if you do not have an existing account
- Redeem the provided key to gain access to your lab environment
- Launch your lab environment to access your virtual machine
- Download class files into your lab virtual machine
- Launch and configure Visual Studio Code (VSC) in your lab virtual machine ahead of running subsequent labs
- Access Azure using provided credentials.

Teaching Points

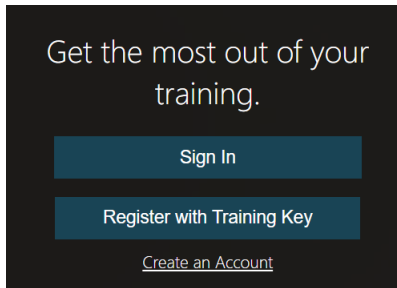

This lab will give you access to your lab environment. It should be run at the beginning of each day of the class before attempting any other labs. The lab environment has a time limit of eight hours after which it will be decommissioned. At this point you will need to run this lab again.

Before you begin

This is the first lab of each day of the class and is begun from your local machine. It is recommended that you close any open applications and browser sessions before beginning.

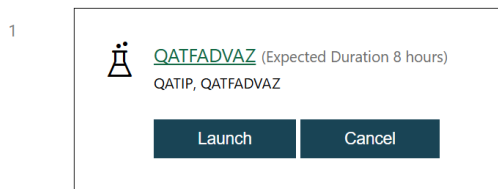

Task1 Set up your Labs environment

1. Complete steps 2 to 4 **once** only during the entire course.
2. Navigate to: <https://qa.learnondemand.net/>
3. If you already have an account, then click **Sign In** and redeem the key provided to you by your instructor.
4. If you do not have an account, then click **Register with Training Key** and provide your details and key as requested.

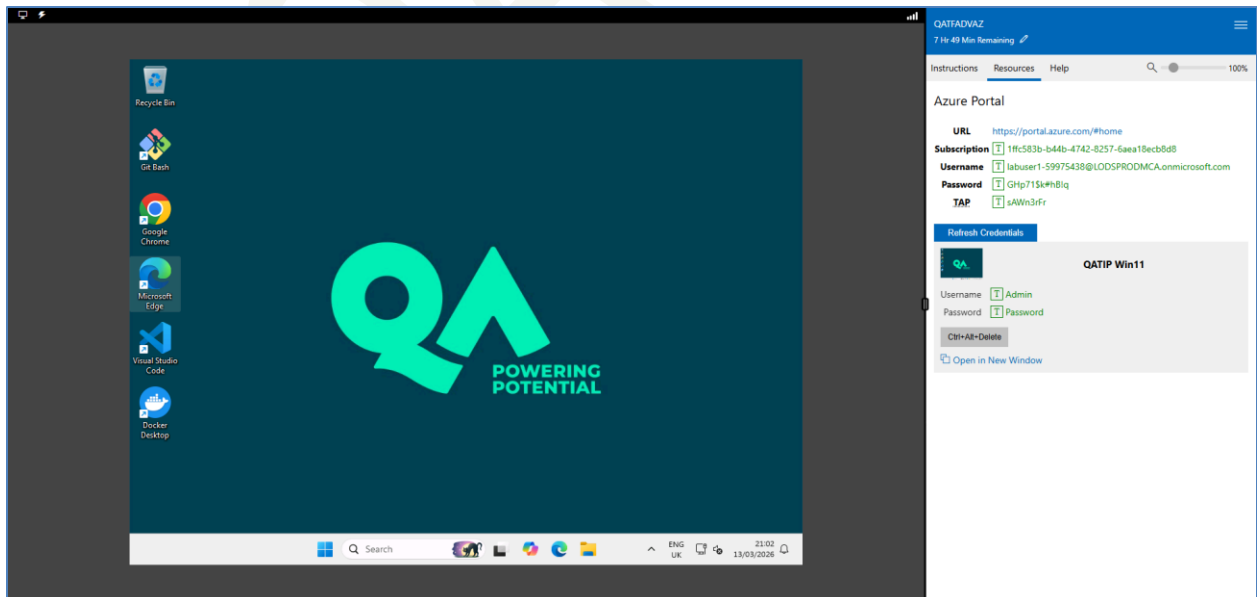

5. Having signed into LOD and redeeming your training key, select your course (click **My Training** on the top menu if required)
6. Scroll down and click **Launch** to provision your lab environment.

Activities (1) (Total Expected Duration 8 hours)

7. This will take a few minutes to launch. The lab environment consists of a remote virtual machine. All work for this course will be performed on this virtual machine. You will use pre-installed VSC as your Integrated Development Environment (IDE) to write and action terraform files. Azure will be accessed through a web browser, also on this machine, to view the results of your work.

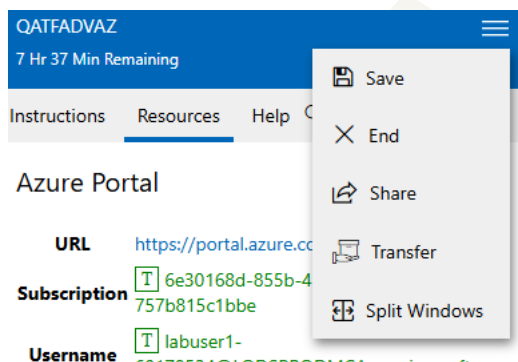

On the right-hand side of the window, click on the Resources tab to view your Azure subscription, username and Temporary Access Pass (TAP) which will be used in this environment...

Azure Portal

URL <https://portal.azure.com/#home>
Subscription [T] 6e30168d-855b-47ca-a11c-757b815c1bbe
Username [T] labuser1-60178534@LODSPRODMCA.onmicrosoft.com
Password [T] j!DaeMJ60+n3
TAP [T] 2=A@%\$%L

In the VM, create a text document on the desktop for holding credentials and other details during the course. Copy your subscription, username and TAP into it, clicking on the [T] to transpose this information as clipboard usage is disabled from outside the lab environment. **Note.** Your TAP will change if your lab is saved and resumed.

8. You can then use the menu option to detach the information pane from the virtual machine display...

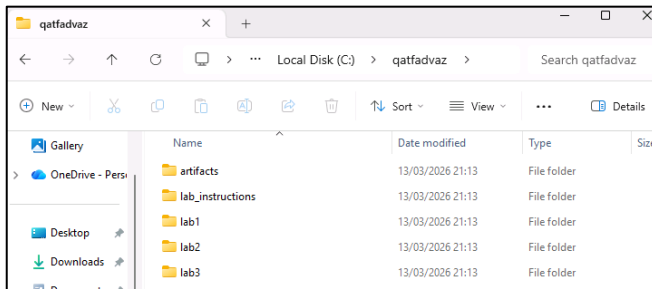

9. The information pane can then be minimized to free up display space. Change the display settings to best fit your screen resolution if required. When appropriate, you can use [Full Screen Icon] at top-left to go full screen.

Task 2 Installing Class Files

10. In the remote VM, open a PowerShell session and navigate to the root of the C drive..
11. Security prevents direct copy/paste from your local machine into the remote environment. Therefore, to download the class repo onto the virtual machine, manually type the following command...

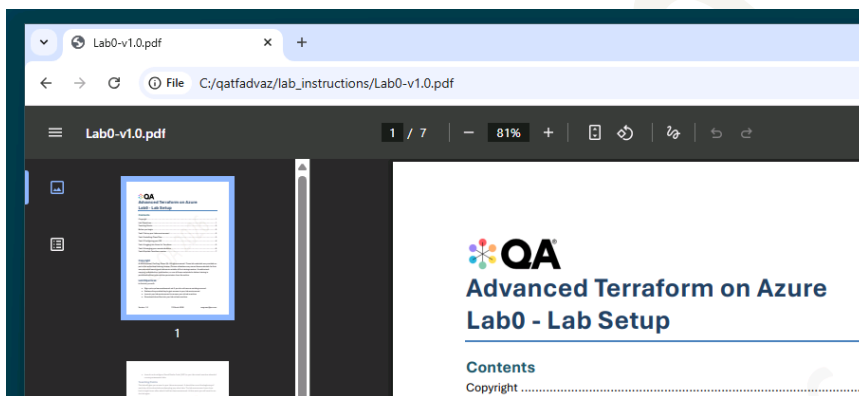

git clone <https://github.com/qatip/qatfadvaz.git>

12. You should now have a **c:\qatfadvaz** folder containing the course manual, lab instructions and lab files...

13. Close the PowerShell session window.

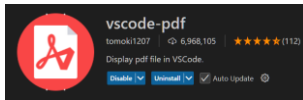

You can now open *this* document *within* the vm using a web browser and browsing to **c:/qatfadv/lab_instructions/Lab0-v1.0.pdf**

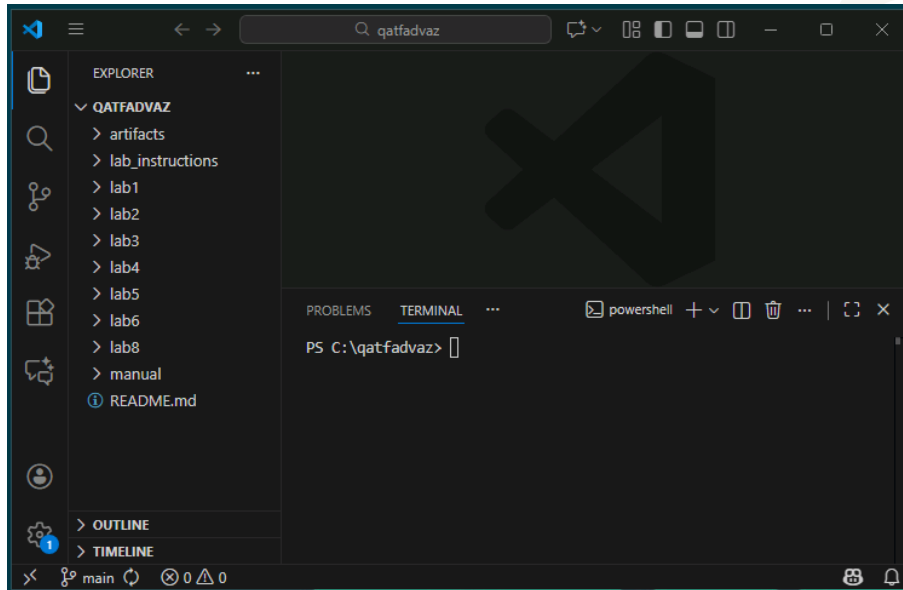

14. Close your local copy of *this* document and continue within the VM.

Task 3 Configuring your IDE

15. Open VSC using the desktop shortcut.
16. If required, change your colour scheme and Mark Done.
17. Close the getting started window.
18. Turn on Autosave (File > Autosave)
19. On the left-hand vertical menu, choose *Extensions* (ctrl + Shift + x) .
20. Search for and install the Hashicorp Terraform extension.
21. Repeat for the **vscode-pdf** and install if you wish to view lab instructions directly inside VSC..

22. Use VSC Explorer to open the c:**qatfadvaz** folder. Trust the authors of files in this folder.
23. Start a terminal session by selecting Terminal, New Terminal..
24. Close any 'getting started' files and you should now see your lab folders and have a terminal session open....

25. Install **jq**, which will be used in later labs... `winget install jqlang.jq`
26. This course was written using Terraform version: **1.14.7**, newer than the currently installed version. Click on the link below to download ...
https://releases.hashicorp.com/terraform/1.14.7/terraform_1.14.7_windows_amd64.zip
27. Delete the current terraform.exe from **c:\terraform** and then extract the newly downloaded version into this directory.
28. As you perform each lab and execute commands in your terminal session, ensure that you move into the appropriate directory as directed.

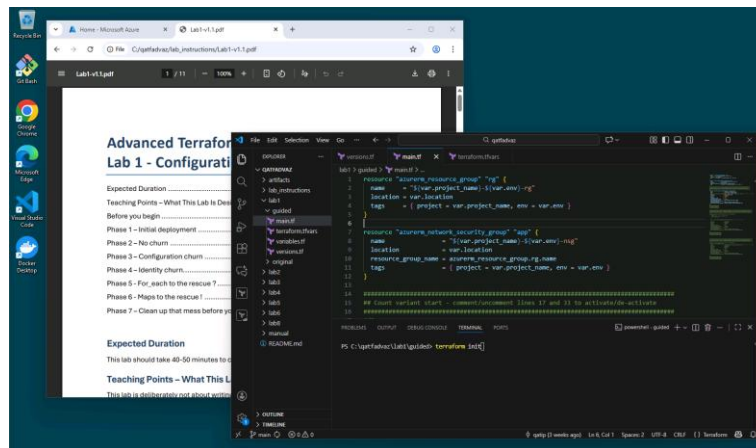

Task 4 Logging into Azure

29. Open a new browser tab and login to the Azure Portal using your lab credentials.
30. When required to run Terraform commands from the IDE terminal, you will need to authenticate to Azure unless you already have an active session.
31. Type "**az login**" in your terminal session

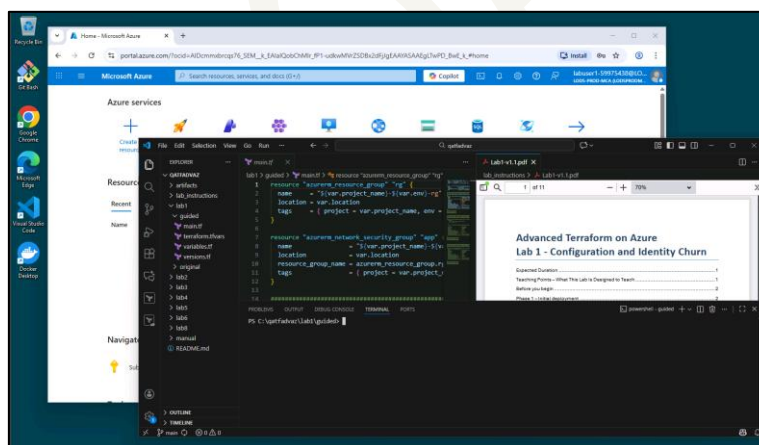

32. A new web browser tab should open, prompting you for credentials
33. When successfully authenticated you may close the browser tab

Task 5 Arranging your remote desktop

34. In order to avoid the frustration of desktop clutter, it is suggested you arrange your desktop as shown below. In this way you can easily switch between your web browser, in which you can view your course manual, lab instructions, the Azure portal and any other web resources, and the VSC interface, in which you will create, and action terraform files.

Alternatively, if you have installed the vscode-pdf extension into VSC then you can view PDFs within the IDE itself...

Congratulations, you have completed this lab
